

CA34115: Internet and Web Technology Assignment

1. Write a program to calculate Electricity bill in PHP
2. Write a PHP program to check whether a number is positive, negative or zero
3. Write a PHP program (P4.php) and create a HTML (P4.html) page. The PHP page needs to grade the HTML quiz, display the user's score on the quiz, and store the results into a MySQL table.
4. Create a JSP page that is the customer information browser (GVBooksCustomerBrowser screen shot below). It should have a list of all the customer files that are stored on your application.
 - i. I should see a list of CustomerId, Customer FirstName and LastName per line of the list.
 - ii. I can pick an item and via a POST (the button View) invoke a different JSP that displays the information on that specific customer by reading the file for that customer
5. Create an ASP page which converts a string from Uppercase to Lowercase.
6. Develop an ASP page by which you can check a number is palindrome or not.
7. Write down the steps to configure IIS Server in your system. (Screenshot desirable).
